

Density is mass per unit of volume. Which pair of lab instruments would a student use to measure the density of seawater?

Unfortunately, we are not given with the choices in which we could have chosen our answers from. However, in order to determine the mass of an object, we use the balance or the weighing scale. Also, for the volume of the water by graduated cylinder. Then, we divide the mass by the volume. In order to measure density, a measurement of volume and mass is required. To measure the density of seawater, the volume could be measured using a glass graduated beaker and the mass could be measured using a set of digital scales. Be sure to take into account the mass of the beaker.

What were the major causes of WWII? Please include at least 4 answers.

The _____ is (are) in charge of administering election laws, including the complex regulations pertaining to how campaigns can spend money.

What is the graph of the absolute value inequality $y < (x+2) - 2$

What is the discriminant of the polynomial below? $4x^2 - 20x + 25$

A company is considering making a new product. They estimate the probability that the new product will be successful is 0.75. If it is successful it would generate \$240,000 in revenue. If it is not successful, it would not generate any revenue. The cost to develop the product is \$196,000. Use the profit (revenue-cost) and expend value to decide whether the company should make this new product
