

a park is shaped like a rectangle with a length 3 times its width w. what is a symplified expression for the distance between opposite corners of the parks

Let the width of the park be; w

width=w

length=3w

and let the distance between opposite corners of the park be; d

then the expression is; $(w)^2 + (3w)^2 = (d)^2$

$\frac{14}{x+3} - 1 = \frac{5}{x+1}$ solve for x

France's interest in north america in the 16th century was mainly because of

What is the formula for the volume of a triangular prism?

A play that respects the demands of performance (the requirements for stage-business, an actor's need to breathe, etc.) might be described as _____.

There is a ratio of 3 boys to every 4 girls. if there are 245 total students, how many are boys
